

A PCA plot showing the first two principal components, PC1 (18.33% variance) on the x-axis and PC2 (12.55% variance) on the y-axis. The plot displays three distinct clusters of data points, each enclosed by a black confidence ellipse. The purple cluster is located in the upper left quadrant, the orange cluster is in the upper right quadrant, and the green cluster is in the lower left quadrant. The ellipses indicate the spread and orientation of each cluster along the principal components.
